

ECHO MADE EASY 2E

ATUL LUTHRA

*Diplomate National Board of Medicine
Consultant Medical and Heart Specialist, Delhi*

KEY SELLING POINTS

- ◆ Includes free CD Rom of the technique of ECHO
- ◆ Bullet-point format to improve readability and recall and redrawn illustrations/figures
- ◆ New chapter on Colour-Doppler Echo
- ◆ Core bestselling title stock

BOOK INFORMATION

Price: £ 18.99
 ISBN: 978 1905740 680
 Pub Date: October 2007
 Format: Paperback
 Extent: 272 pages
FREE CD ROM

Ultrasound has revolutionised clinical practice by providing the fifth dimension to physical examination after inspection, palpation, percussion and auscultation. Echocardiography is the application of ultrasound for examining the heart. It is a practical, widely available, cost effective and non-invasive means of diagnosis.

This the 2nd edition of Echo Made Easy has been greatly improved - the text has been changed into bullet-point format to improve readability and recall. The illustrations and figures have been redrawn and colour-flow maps are now depicted in their true colours as they appear on the screen during echocardiography. In addition, an entire new chapter on Colour-Doppler Echo has been incorporated and is supported by coloured illustrations.

The book begins with the basic principles of ultrasound and Doppler and the clinical applications of various echo-modalities. This is followed by an account of different echo-windows and normal echo-views with due emphasis being laid on pitfalls in diagnosis, differentiation between seemingly similar findings, their causation and their clinical relevance.

This book is particularly intended for students of cardiology as well as keen clinicians wanting to know more about echocardiography .

Contents:

- | | |
|---|--|
| 1. What is an ECHO? Principle of Ultrasound Principle of Doppler | |
| 2. Conventional Echo – 2-Decho, M-Mode Echo, CW Doppler, PW Doppler, Clinical Applications of Conventional Echo | 9. |
| 3. Colour Doppler Echo – Principle, Technique, Advantages, Limitations, Applications | 10. Pulmonary Hypertension |
| 4. The Echo Windows – Transthoracic Echo, Echo Windows, Transoesophageal Echo, Future Directions in Echo | 11. Aortic Diseases |
| 5. Normal Views and Values – Normal Echo, Sequence of Scanning, What is Normal?, Normal Variants, Normal Values, Normal Valves | 12. Congenital Heart Diseases – Ventricular Septal Defect, Atrial Septal Defect, Patent Ductus Arteriosus, Tetralogy of Fallot, Eisenmenger Reaction, Quantification of Shunt |
| 6. Ventricular Dysfunction – LV Systolic Dysfunction, LV Diastolic Dysfunction, RV Dysfunction | 13. Valvular Diseases – Mitral Stenosis, Mitral Valve Prolapse, Flail Mitral Leaflet, Mitral Annular Calcification, Mitral Regurgitation, Tricuspid Stenosis, Tricuspid Regurgitation, Ebstein's Anomaly, Aortic Stenosis, Aortic Regurgitation, Pulmonary Stenosis, Pulmonary Regurgitation |
| 7. Cardiomyopathies – Dilated Cardiomyopathy (DCMP), Restrictive Cardiomyopathy (RCMP), Hypertrophic Cardiomyopathy (HOCM) | 14. Pericardial Diseases – Pericardial Effusion, Cardiac Tamponade, Constrictive Pericarditis |
| 8. Coronary Artery Disease – Indications for Echo in Coronary Artery Diseases, Myocardial Ischemia, Myocardial Infarction, Left Ventricular Dysfunction, Right Ventricular Dysfunction, Acute Mitral Regurgitation, Acute Ventricular Septal Defect, Left | 15. Endocardial Diseases |
| | 16. Intracardiac Masses – Cardiac Tumours, Left Atrial Myxoma, Cardiac Thrombi, Ventricular Thrombus |
| | 17. Thromboembolic Diseases |
| | 18. Systemic Diseases |
