THE BOOK

Many neurological disorders are reflected in the eyes, and within the last decade the improvement in imaging and information technology has enabled the science of neuro-ophthalmology to grow into a rich and complex field of study. The purpose of this book is to provide an overview of the diseases that constitute neuro-ophthalmology, with pictorial assistance. This atlas is a guide to the interpretation of clinical symptoms and signs in neuro-ophthalmology. It has a special section of illustration multiple choice questions with explanatory answers.
